Art Unit: 1774

1. The indicated allowability of claims 35-50 is withdrawn in view of the newly discovered reference(s) to Langan. Rejections based on the newly cited reference(s) follow.
2. Claims 42-45 are allowed.
3. Claims 37, 47 and 48 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 35 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by the patent to Langan (USP 5,686,159).
5. Claims 38-41, 46, 49 and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent to Langan.

Langan teaches a thermal imaging member comprising a substrate 15 which carries two image-forming layers 16 and 12, the one (16) closer to the substrate having a lower activation temperature (see Fig. 1 and column 3, lines 32-35). The experimental modification of this prior art in order to ascertain optimum operating conditions (e.g., determine the thickness of layers) fails to render applicants' claims patentable in the absence of unexpected results.
